

Independent USB power only. INA229 U_PM measures the interposer shunt via J_SENSE. No DUT supply on carrier.
LED1–5 GP27/26/22/21/20. INA229 SPI0 GP4–7. SD SPI1 GP12–15.
U_SD input: USB_VBUS (physical 40). EN: Pico 3V3. SD_3V3 is separate.
Card CMD and DAT0–3 have 10k pull-ups to SD_3V3; CLK has no pull-up.
No card-detect switch. Buffered logger firmware is a separate milestone.
Interposer cables straight-through. Bench validation pending.

Independent USB power; INA229 SPI0; microSD SPI1; five programmable LEDs
