

DRAFT: no PI connection before protection / footprint / thermal validation.
Current: shunt pads 1 -> 4, Kelvin: pads 2 (+) and 3 (−).
Supply: 5.1 V only. Controller and its VOUT supply remain before shunt.
No bulk capacitance after shunt. PI-side UART buffer overhead IS measured.
J2 is one continuous long-tall socket with male pass-through.

NOT FOR MANUFACTURE: routing, footprint and mechanical review required
